

Welcome to the Luxaflex lifestyle

Thank you for purchasing Luxaflex® Timber Shutters. With proper operation and care your new shutters will provide years of beauty and performance. Please review this instruction booklet thoroughly for operation and care information.

The information and advice included in this brochure has been prepared with care. However, we are unable to accept responsibility for the results of or any damage caused during operation.

As with all wood-based products, Luxaflex® Woods Products are subject to some variations in the grain, colour and texture, and are considered normal, acceptable quality. Precautions should be taken to reduce exposure to harsh environmental elements, such as salt air. Continuous exposure through open windows and doors will accelerate the wood deterioration. Additionally, the timber shutters are made from real, natural wood. Therefore great care must be taken when cleaning the blinds. Even though the wood is sealed, water and sometimes excessive dampness may cause warpage or discolouration of the slats.

Timber Shutters

Operation

Tilt bar operation

For shutters with a tilt bar, use the tilt bar to adjust the louvre closure.

TruView® operation

For shutters with the TruView® the Mechanism, gently grasp a louvre blade in the middle of the panel and move the louvre to the closed position. Run your hand over the louvres to close them completely.

IMPORTANT NOTE

Do not grab the tilt bar or louvre to open out a hinged or bi-fold on track shutter or to slide a sliding shutter as this may place too much pressure on the tilt bar and louvre fittings. Instead open the louvres, if necessary, and gently grasp the shutter panel frame.

Care and cleaning

Routine maintenance

Dusting

Dust can be easily brushed off at regular intervals using a clean soft cloth, a feather duster or a vacuum cleaner with brush attachment.

To dust or vacuum, tilt the louvre up and then down, (but not entirely closed), to reach the entire top and bottom surfaces of the louvre.

Spot cleaning

- Dirty louvres can be cleaned with a dry cloth.
- Chemical based cleaning products are not recommended.
- Do not allow a lot of water to come into contact with the timber. Although the timber is coated, water can cause the louvres to warp, bow or twist, stains to occur or the paint/lacquer to peel. Do not use a damp cloth when cleaning. Damage caused by water is not covered under warranty.
- Luxaflex Woods Collection shutters and blinds are a natural product and over time will age from the effects of the sun.

HANDY TIP: When cleaning any window, spray glass cleaner on a cloth rather than spraying directly on the window. This will prevent damage to the wood finish by splattering the cleaning solution.
